Activity

Occupational Permit System and Online PPAP / PPMP System / Online Cedula / Miscellaneous System/ API Universal Checkout

May 11, 2026

7:30 AM – 12:30 PM

In the morning, I focused on improving and debugging the web-based changelog and file handling system. I worked on enhancing support for multiple file attachments within a single text entry, ensuring that the system can properly adapt when two or more files are included. I also reviewed and modified JavaScript functions related to mouseover events for file previews, aiming to improve the user experience when hovering over grouped attachments. Additionally, I examined the existing structure of the GitHub-style modal design and layout issues, particularly addressing alignment and rendering concerns to improve the overall UI consistency.

1:30 PM – 6:30 PM

In the afternoon, I continued troubleshooting issues related to PDF preview and modal rendering, where PDF files were not properly displaying in the preview window. I analyzed the file type detection logic and preview rendering flow to identify why PDFs were only loading but not displaying correctly. I also revisited the modal structure to improve image and PDF handling consistency, ensuring both file types can be properly previewed. Furthermore, I refined parts of the changelog system to better handle dynamic file rendering and improve compatibility with multiple attachments per entry, aligning the UI closer to a GitHub-style interface.
